

# Guide to the July 2017 Views of the Electorate Research Survey

DEMOCRACY FUND VOTER STUDY GROUP DATA RELEASE NO 1.

APRIL 2018

## About the Voter Study Group

The Democracy Fund Voter Study Group is a new research collaboration of nearly two dozen [analysts and scholars](#) from across the political spectrum examining and delivering insights on the evolving views of American voters.

As the 2016 presidential campaign unfolded, it became increasingly clear that the underlying values and beliefs driving voter decisions need to be better understood. To that end, Henry Olsen ([Ethics and Public Policy Center](#)), John Sides ([The George Washington University](#)), and Joe Goldman ([Democracy Fund](#)) convened a politically diverse group of conservative, progressive, and independent public opinion experts to study the electorate together. The group sought not to achieve consensus, but to engage in discussion about how the views of the electorate are evolving and what the implications of those changes may be.

As a newly formed collaborative, the group first reviewed existing research and identified additional questions that require study. The VOTER Survey (Views of the Electorate Research Survey) is the study group's first original research.

The research of the Democracy Fund Voter Study Group is designed to help policy makers and thought leaders listen more closely, and respond more powerfully, to the views of American voters. Our goal is to have more productive conversations where voters feel like they are truly heard. We hope the study group's research and analysis helps us understand each other and make our democracy more functional.

The Voter Study Group is funded by a grant from the Democracy Fund to the Ethics and Public Policy Center (EPPC).

## Participants

Joe Goldman (President, Democracy Fund)	Tod Lindberg
Henry Olsen (Project Director, VSG)	Brink Lindsey
John Sides (Research Director, VSG)	Dalia Mogahed
Karlynn Bowman	Michael A. Needham
Michael Dimock	Hans Noel
Lee Drutman	Adrian D. Pantoja
Emily Ekins	Patrick Ruffini
Morris Fiorina	Ruy Teixeira
William A. Galston	Kristen Soltis Anderson
Robert Griffin	Ismail White
Robert P. Jones	David Winston
Kei Kawashima-Ginsberg	Felicia Wong
Taeku Lee	

## Methodology

The Views of the Electorate Research (VOTER) Survey was conducted by the survey firm YouGov. In total, 5,000 adults (age 18+) with internet access took the survey on-line between July 13 and July 25, 2017. The reported margin of error is plus or minus 3%.

These respondents were originally interviewed by YouGov in 2011–2012 as part of the 2012 Cooperative Campaign Analysis Project (CCAP). In that survey, 45,000 respondents were first interviewed in December 2011 and were interviewed a second time in one of the 45 weekly surveys between January 1 and November 8, 2012. After the November election, 35,408 respondents were interviewed a third time. In December 2016, 11,168 panelists from 2012 CCAP were invited to respond and 8,637 of them (77%) completed the survey. YouGov also supplied measures of primary voting behavior from the end of the primary period (July 2016), when these respondents had been contacted as part of a different survey project. This December 2016 survey (N=8,000) constitutes the first VOTER Survey and is available at: <https://www.voterstudygroup.org/data>.

Respondents in this July 2017 survey have thus been interviewed 5 separate times: December 2011, November 2012, July 2016 (primary vote choice only), December 2016, and July 2017.

The 2012 CCAP was constructed using YouGov’s sample matching procedure. A stratified sample is drawn from YouGov’s panel, which consists of people who have agreed to take occasional surveys. The strata are defined by the combination of age, gender, race, and education, and each stratum is sampled in proportion to its size in the U.S. population. Then, each element of this sample is matched to a synthetic sampling frame that is constructed from the U.S. Census Bureau’s American Community Survey, the Current Population Survey Voting and Registration Supplement, and other databases. The matching procedure finds the observation in the sample from YouGov’s panel that most closely matches each observation in the synthetic sampling frame on a set of demographic characteristics. The resulting sample is then weighted by a set of demographic and non-demographic variables (in the dataset, this is the variable “weight”).

On average, YouGov's methodology produces less bias across a series of benchmarks than do other methodologies using online samples. For more information on the process see:

## Variable Names

Variables whose names end with "\_2017" capture responses to this July 2017 survey.

Variables whose names end with "\_2016" capture responses to the December 2016 wave of the survey. The exception were three variables about the presidential primary that were asked in July 2016 (pp\_primary16\_2016, pp\_demprim16\_2016, pp\_repprim16\_2016).

Variables whose names end with "\_2012" capture responses to the November 2012 wave of the survey, which was conducted after the 2012 election.

Variables whose names end with "\_baseline" capture responses to the December 2011 wave of the survey.

ft\_black\_2017

Feeling thermometer - BLACKS  
-----

We'd like to get your feelings toward some groups who are in the news these days. Ratings between 50 degrees and 100 degrees mean that you feel favorable and warm toward the group. Ratings between 0 degrees and 50 degrees mean that you don't feel favorable toward the group and that you don't care too much for that group. You would rate the group at the 50 degree mark if you don't feel particularly warm or cold toward the group. If we come to a group who you don't recognize, you don't need to rate that group. 1,097	8	Don't know
51	.	

-----  
ft\_black\_2016  
Feeling thermometer - Blacks  
-----

We'd like to get your feelings toward some groups who are in the news these days. Ratings between 50 degrees and 100 degrees mean that you feel favorable and warm toward the group. Ratings between 0 degrees and 50 degrees mean that you don't feel favorable toward the group and that you don't care too much for that group. You would rate the group at the 50 degree mark if you don't feel particularly warm or cold toward the group. If we come to a group who you don't recognize, you don't need to rate that group. Click on the thermometer to give a rating.

blacks\_t\_baseline

Feeling thermometer - Blacks

-----

We'd like to get your feelings toward some groups who are in the news these days. Ratings between 50 degrees and 100 degrees mean that you feel favorable

and warm toward the group. Ratings between 0 degrees and 50 degrees mean that you don't feel favorable toward the group and that you don't care too much for that group. You would rate the group at the 50 degree mark if you don't feel particularly warm or cold toward the group. If we come to a group who you don't recognize, you don't need to rate that group. Click on the thermometer to give a rating.
