

Democracy Fund + UCLA Nationscape Methodology and Representativeness Assessment

DEREK HOLLIDAY, TYLER RENY, ALEX ROSSELL HAYES, AARON RUDKIN, CHRIS TAUSANOVITCH,
and LYNN VAVRECK

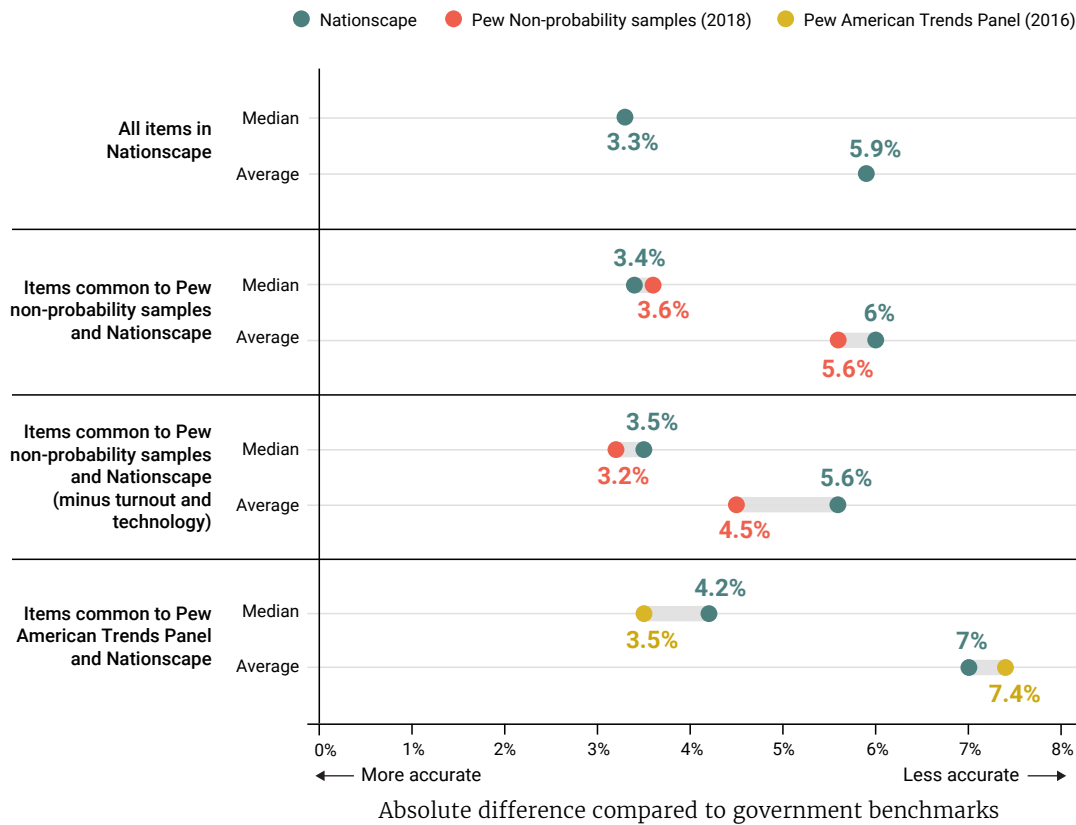

Department of Political Science, UCLA

DECEMBER 2021

In this report, we explain the methodology of The Democracy Fund + UCLA Nationscape Project and the procedures used to estimate population quantities. We evaluate the representativeness of Nationscape by replicating the process used by the Pew Research Center to evaluate the representativeness of online samples. To do so, we asked respondents a set of questions that are also asked on reliable large-sample government surveys. We produced estimates based on responses to these questions using the same procedures that we use to produce our weekly estimates regarding public opinion and the 2020 election. We compare the differences between our estimates and government survey targets to the differences between the online samples that Pew examined and the same government targets. We find that our procedures for Nationscape return estimates that are as close to the government survey targets as the other online samples tested by the Pew Research Center. The median difference between our estimates and the government survey targets was 3.3 percent while the Pew analysis found a median difference of 3.6 percent.

Figure 1

Representativeness of Nationscape Compared to Government Benchmarks, Pew Samples

Methodology

Nationscape is a survey consisting of over 500,000 interviews between July 2019 and January 2021, covering the final year of Donald Trump’s presidency, 2020 U.S. presidential nominating contests, COVID-19 pandemic, Black Lives Matter movement, 2020 presidential campaign, election, and its aftermath, including the insurrection at the U.S. Capitol on January 6th, 2020, and the inauguration of Joe Biden as the 45th president of the United States. The survey began on July 10, 2019, and includes interviews with roughly 6,250 people per week. The sample is weighted to be representative of the U.S. adult population.

Sample for Nationscape is provided by Lucid, a market research platform operating an online exchange for survey respondents. Nationscape samples match a set of demographic quotas on age, gender, race/ethnicity, region, income, and education. Respondents are sent from Lucid directly to survey software operated by the Nationscape team. All respondents take the survey online and must complete an attention check before taking the survey. The survey is conducted in English.¹

The survey data are weighted to be representative of the U.S. adult population. The weights are generated using a simple raking technique. Like others, we find there is little benefit to more complicated approaches (Mercer et al. 2018). One set of weights is generated for each week’s survey. The targets to which Nationscape is weighted are derived from the U.S. adult population of the 2017 American Community Survey (ACS) of the U.S. Census Bureau. The one exception is the 2016 vote, which is derived from the official election results released by the Federal Election Commission (FEC).

We weight on the following factors: gender, the four major census regions, race, Hispanic ethnicity, household income, education, age, language spoken at home, nativity (U.S.- or foreign-born), 2016 presidential vote, and the urban-rural mix of the respondent’s ZIP code. We also weight on the following interactions: Hispanic ethnicity by language spoken at home, education by gender, gender by race, race by Hispanic origin, race by education, and Hispanic origin by education.

¹ We initially offered the survey in both Spanish and English, allowing respondents to choose which language they’d like to use question by question. Very few people used this option.

Table 1

Weighting Targets (%)

Gender			
Male	48.3	Female	51.7
Census region			
Midwest	20.9	Northeast	17.6
South	37.8	West	23.7
Hispanic ethnicity

<\$20k	10.7	\$20–35k	11.6
\$35–50k	11.8	\$50–65k	11.3
\$65–80k	9.8	\$80–100k	11.0
\$100–125k	10.5	\$125–200k	14.6
≥\$200k	8.7		
Metropolitan status			
Pure rural	0.9	Rural metro	23.2
Suburban	24.2	Urb.-suburb.	42.2
Pure urban	9.5		
2016 vote			
Trump	27.2	Clinton	28.4
Other	3.3	No vote	41.0

Voting

Voting rates for 2016 are adjusted to reflect the inclusion of younger respondents who were not eligible to vote in 2016 and because some survey respondents report voting even though they did not. A -2.7 percentage point adjustment is made for young respondents and a 6.0 percentage point adjustment is made for over-reporting, yielding a target turnout rate of $55.7 - 2.7 + 6.0 = 59.0$ percent.²

2 Our estimate for vote overreporting comes from Jackman and Spahn (2019), who use the American National Election Studies.

Income

Nationscape respondents may choose not to provide household income. Targets for response categories are based on American Community Survey responses multiplied by the proportion who chose to answer the Nationscape income question. The target for nonresponse is constructed as the proportion of Nationscape respondents who did not provide an answer. In effect, this means non-respondents are not weighted for income.

Metropolitan Status

Metropolitan status is derived by cross-walking Nationscape respondents' ZIP codes to the Census Bureau's Public Use Microdata Areas (PUMAs) using the 2012 MABLE Geocorr. The crosswalk is based on population percentages. PUMAs are assigned a metropolitan status based on the average status of American Community Survey respondents within them (see Table 2 below). Nationscape respondents' PUMA-level metropolitan statuses are weighted to American Community Survey respondents' PUMA-level metropolitan statuses.

Table 2

Metropolitan Status Translations

	PUMA Average	Individual Code Assigned
Pure rural	0.0–0.8	0
Rural metro	0.8–1.6	1
Suburban	1.6–2.4	2
Urban-suburban	2.4–3.2	3
Pure urban	3.2–4.0	4

Representativeness Assessment

Nationscape is not built from a random sample of the population. It uses a convenience sample selected on a set of demographic criteria. As Kennedy and Deane (2019) note, nearly all contemporary surveys lack the properties of random selection, even those that derive from random sampling procedures, due to low response rates in the population. Previous evaluations of samples constructed with Lucid respondents have been done (Coppock and Green 2016, Coppock and McClellan 2019). While the conclusions of those comparisons are encouraging, they are not evaluations of the specific procedures used to generate Nationscape samples.³

The purpose of this report is to present an evaluation of Nationscape data in terms of its representativeness of the U.S. adult population.⁴ We do so by estimating arbitrary population quantities based on previous work of this nature done by the Pew Research Center.

3 Lucid provides an automated service through its Lucid Theorem product offering. That is *not* how Nationscape was produced. The Nationscape team worked closely with the special services unit at Lucid to manage the flow of sample into the survey to ensure quota targets were satisfied and in balance throughout the field period.

4 For assessments of Nationscape based on other criteria, such as cooperation rates and response quality, see Vavreck and Tausanovitch (2021).

Strategy

Our strategy for assessing the representativeness of the data closely follows the Pew Research Center’s evaluations of online non-probability samples in 2016 and 2018. In particular, Pew compares the estimates generated by several online vendors to estimates of the same quantities in census data and other high-quality sources, primarily the ACS and supplements to the Current Population Study (CPS). Pew’s 2016 report assessed the quality of these samples (Kennedy et al. 2016) and its 2018 report assessed how various choices impact quality (Mercer et al. 2018).

Our assessment compares Nationscape results to the results featured in the 2018 Pew report. For a smaller number of items, we also compare Nationscape results to the results from Pew’s American Trends Panel, which was recruited using probability sampling. This comparison uses data from the 2016 report. Following Pew, we calculate the difference between the targets and the estimates across all of our items to assess the survey’s representativeness. Our expectation is to have the same amount of error as Pew, on average. In a survey conducted from July 11 to 17, 2019, we asked all of the questions from the 2018 Pew report, with the exception of a question asking respondents whether they were a U.S. citizen.⁵

We also asked 12 additional questions that were not used in the Pew report but can be compared to census sources.

Types of Questions

This exercise involves three types of survey questions. Some ask respondents to report attitudes, such as whether they trust their neighbors. Other questions are about reported behaviors, such as voter turnout, which depend on respondents’ recall. A final type of question asks people to report facts about their lives, such as how many children they have or whether they own their home. In each case, we compare Nationscape results to the results from large government surveys, due to the lack of a verifiable benchmark, such as an administrative file of voters or vehicle registrations.

Naturally, any divergence between Nationscape results and government surveys may depend on the type of question. Prior to fielding the assessment, we suspected there would be two categories of questions for which survey estimates might be further from census estimates than were the surveys analyzed by the Pew Research Center: voting in prior elections and the use of technology. The surveys analyzed by Pew were conducted immediately following the election about which they asked — thereby reducing memory errors relative to the fielding of our survey that occurred months, and in one case years, from the elections about which we asked.

5 This survey was fielded as the president tried to add a citizenship question to the U.S. Census and the U.S. Supreme Court denied his request to do so. Asking a citizenship question at this time was a political decision that could have compromised survey quality and potentially lead people to drop out of the survey.

Similarly, the technologies the census asks about, such as e-readers and tablet devices, are changing rapidly. Although we use the most recent census data available, these sources are usually a year old or more, in one case coming from as early as 2013; as such, we may find that fewer people are using e-readers than during earlier periods, but that may not be reflective of error.

The Appendix provides the full list of sources and description of questions used.

Findings

For every question, we compared the estimates from the online samples analyzed by Pew with the estimates from the government source Pew used for comparison. We computed the absolute value of the difference between those numbers. Then we did the same thing for the Nationscape estimates, comparing them to the most recent estimates provided by the same government sources used by Pew.

We begin by reporting the average and median differences across all the response categories for every question. Note that this procedure gives equal weight to all response categories, so questions with many categories play a greater role in the average or median.

For the samples analyzed by Pew, the median absolute difference from government survey benchmarks was 3.6 percent, and the average was 5.6 percent (see Table 3). For this same set of survey questions, the median absolute difference between Nationscape and government survey benchmarks was slightly lower (3.4 percent) and the mean absolute difference was slightly higher (6.0 percent).

If we exclude questions about past voter turnout and technology use, the median and average differences from government survey benchmarks are slightly lower, both in the online samples analyzed by Pew and in Nationscape. The online samples analyzed by Pew and Nationscape perform equally well.

Table 3

2018 Comparison Summary Findings

	Pew Bias	Nationscape Bias
All common items (median)	3.6%	3.4%
All common items (average)	5.6%	6.0%
Minus vote & tech (median)	3.2%	3.5%
Minus vote & tech (average)	4.5%	5.6%
All items (median)	NA	3.3%
All items (average)	NA	5.9%

Finally, we computed the average and mean differences between the Nationscape estimates and the government sources for all the questions asked, including those not asked by Pew in its assessments. The absolute differences here are similar (a median of 3.3 percent and an average of 5.9 percent).

We also compared Nationscape performance to the Pew American Trends Panel which, as noted earlier, was recruited using probability sampling rather than the non-probability sampling used in many online surveys and in Nationscape. For the items common to both surveys, the American Trends Panel and Nationscape had similar absolute differences from the government survey benchmarks (Table 4).⁶ The median absolute difference was slightly lower in the American Trends Panel (3.5 percent vs. 4.2 percent in Nationscape) but the average difference was slightly higher (7.4 percent vs. 7.0 percent).

Table 4

Representativeness of Pew American Trends Panel and Nationscape Compared to Government Benchmarks

	Pew ATP Bias	Nationscape Bias
Common items (median)	3.5%	4.2%
Common items (average)	7.4%	7.0%

The Appendix lists all the estimates for every survey question and all response categories in the online samples analyzed by Pew, the American Trends Panel, and Nationscape. For each response category, we report the government benchmark (“baseline”), the survey result, and the difference between the two. These results show that the Nationscape sample appears to be more civically engaged than the samples analyzed by Pew, relative to government benchmarks. And as we anticipated, the Nationscape data is particularly different from a 2017 government benchmark on the use of tablets or streaming audio.

On some other metrics, such as financial status, Nationscape is closer to these benchmarks — e.g., a difference of 7.8 percent on full-time employment (vs. 14.5 percent in the samples analyzed by Pew) and a difference of 6.1 percent in the number of people collecting food assistance (vs. 12.9 percent in the other samples). Nationscape is similarly close to benchmarks on questions such as the number of cars that people own, the percentage of the population with a driver’s license, and the percentage with various disabilities.

Conclusion

The methodology employed in Nationscape generates estimates of general population characteristics that are as closely aligned with government survey benchmarks, with other online non-probability samples, and with an online probability sample. Nationscape estimates are no more or less representative of the U.S. adult population than the estimates from many commercial non-probability samples, including those from vendors used regularly in political polling.

6 The median and average differences in Tables 3 and 4 are different for the Nationscape data because a smaller set of questions was available for comparison with the American Trends Panel estimates.

Appendix B: Full Questions and Sources

CIVIC ENGAGEMENT					
Variables	Question	Responses	Source	Note	Link
talk_neighbors	During a typical month in the past year, how often did you talk with any of your neighbors?	(1) Basically every day (2) A few times a week (3) A few times a month (4) Once or less than once a month (5) Not at all	CPS Sept. 2017		https://cps.ipums.org/cps-action/variables/CESOCIALIZE
trust_neighbors	How much do you trust the people in your neighborhood? In general, do you trust...	(1) All of the people in your neighborhood (2) Most of the people in your neighborhood (3) Some of the people in your neighborhood (4) None of the people in your neighborhood	CPS Nov. 2013		https://cps.ipums.org/cps-action/variables/CENEIGHCONF
comm_assoc	In the last 12 months, that is since July 2018, have you participated in a school group, neighborhood, or community association such as PTA or neighborhood watch group?	(1) Yes (2) No	CPS Nov. 2013		https://cps.ipums.org/cps-action/variables/CEORGCOM
volunteer	In the last 12 months, that is since July 2018, have you done any volunteer activities through or for an organization?	(1) Yes (2) No	CPS Sept. 2017	The variable used to produce this estimate is a recode of two questions from the CPS. The second question clarifies the definition of "volunteer activities" and is asked if respondents skipped or answered no to the first question.	https://cps.ipums.org/cps-action/variables/VLSTATUS

FINANCIAL					
Variables	Question	Responses	Source	Note	Link
employ_status	Last week, were you working full time, part time, going to school, keeping house, or what?	(1) Working full time (2) Working part time (3) With a job, but not at work because of temporary illness, vacation, or strike (4) Unemployed, laid off, looking for work (5) Retired (6) In school (7) Keeping house	GSS 2018		https://gssdataexplorer.norc.umd.edu/variables/3/vshow

housing	Is your house, apartment, or mobile home...	(1) Owned by you or someone in your household with a mortgage or loan (2) Owned by you or someone in your household free and clear (3) Rented (4) Occupied without payment or rent	ACS 2017	https://usa.ipums.org/usa-action/variables/OWNERSHP https://www.socialexplorer.com/tables/ACS2017_5yr/R12207910
food_stamp	Did anyone in your household get food stamps or use a food stamp benefit card at any time during 2018?	(1) Yes (2) No	CPS ASES 2018	https://cps.ipums.org/cps-action/variables/FOODSTMP
insured	Are you covered by any kind of health insurance or some other kind of health care plan? This includes health insurance obtained through employment or purchased directly as well as government programs like Medicare and Medicaid that provide medical care or help pay medical bills.	(1) Yes (2) No	CPS ASES 2018	https://cps.ipums.org/cps-action/variables/HICOVNOW

FAMILY

Variables	Question	Responses	Source	Note	Link
marital_status	What is your marital status?	(1) Married (2) Separated (3) Divorced (4) Widowed (5) Never married/single	CPS May 2019		https://cps.ipums.org/cps-action/variables/MARST
children_household	How many children, younger than 18 years of age live in your household?	(1) None / NA (2) 1 (3) 2 (4) 3 or more	ACS 2017	This figure is calculated by counting the number of children under 18 in each ACS household.	https://usa.ipums.org/usa/
family_size	How many family members, including yourself, live in your household? Family members include anyone related to you by blood, marriage, or adoption.	(1) Only me (2) 2 (3) 3 (4) 4 (5) 5 or more	CPS May 2019		https://cps.ipums.org/cps-action/variables/FAMSIZE
total_household	How many adults, ages 18 and older, including yourself, live in your household? AND How many children, younger than 18 years of age live in your household?	(1) 1 (2) 2 (3) 3 (4) More than 3	ACS 2017	This figure is calculated by adding the number of adults in each ACS household to the number of children under 18 in each ACS household.	https://usa.ipums.org/usa/

PERSONAL

Variables	Question	Responses	Source	Note	Link
lived_home_1year	Did you live in your house or apartment one year ago?	(1) Same house or apartment (2) Different house or apartment in the United States (3) Different house or apartment outside of the United States	CPS ASES 2018		https://cps.ipums.org/cps-action/variables/MIGRATE1
active_duty	Have you ever served on active duty in the U.S. Armed Forces, Reserves, or National Guard?	(1) Have been on active duty (2) Have never been on active duty	CPS May 2019	The variable used to produce this estimate is a recode that collapses people who are currently on active duty and people who were on active duty in the past, and does not consider Reserves or National Guard as active duty.	https://cps.ipums.org/cps-action/variables/UH_VETEV_1
citizen	Are you a citizen of the United States?	(1) Yes, a U.S. citizen (2) No, not a U.S. citizen	CPS May 2019		https://cps.ipums.org/cps-action/variables/CITIZEN
gun_ownership	Do you happen to have in your home or garage any guns or revolvers?	(1) Yes (2) No	GSS 2018		https://gssdataexplorer.norc.umd.edu/variables/679/vshow
smoked1	Have you smoked at least 100 cigarettes in your entire life?	(1) Yes (2) No	National Health Interview Survey 2018	The variable used to produce this estimate collapses two questions from the NHIS.	https://www.cdc.gov/nchs/nhis/nhis_2018_data_release.htm
food_allergy	Do you have any food allergies?	(1) Yes (2) No	National Health and Nutrition Examination Survey 2010		https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4623408/

POLITICAL

Variables	Question	Responses	Source	Note	Link
voted_2016	In the 2016 presidential election between Donald Trump and Hillary Clinton, did things come up that kept you from voting, or did you happen to vote?
